# STEINBAUER. More Power. More Profit.

### Our Tier4A performance modules are working, is yours?

With applications available for the full range of Tier4A engines STEINBAUER is the proven and reliable choice for additional power for your new Tier4 machine. Our plug and play solution provides 25% increases in both power and torque, with the added benefit of optimizing fuel consumption without adversely affecting the reliability of your engine.

The STEINBAUER PowerModule is the **safest** and most **effective** way to tune modern diesel engines. The STEINBAUER product is a microprocessor-controlled, "Intelligent PowerModule". It works in such a way that the factory ECU remains in **control** of the engine safety settings. Therefore, your machine does not go outside the safety parameters set by the manufacturer.

Other forms of diesel tuning such as ECU remapping/chip tuning or the most common form of Ag machine tuning, devices that plug into the end of the common rail pressure sensor, modify the signal resulting in increased fuel rail pressure to deliver more fuel. This multi-channel tuning will override the manufacturers safety settings and can result in the possibility of damage to the engine.

The STEINBAUER PowerModule works **with** your ECU, not against it, which is what makes this the safest and most effective solution available on the North American market. The STEINBAUER PowerModule connects to the ECU via original equipment specification connectors (NO CUTTING OF WIRES) and alters the

**injector duration.** This achieves the required level of fueling without increasing rail pressure. This method of tuning removes the issues associated with over pressuring the fuel system and tripping or having to modify the pressure relief valve.

The STEINBAUER product is quite simply the **most effective, reliable** and **advanced** power-enhancement product available for your agricultural engine on the North American market. "Of course there are cheaper products on the market - but is cheaper really better? When you are talking about a machine worth thousands of dollars - would you really trust this with a cut-price product?" says Engineering Director Hubert Eder.

Once installed with a STEINBAUER PowerModule you are able to **work more acres per hour**, this translates into less hours required to cover the same amount of ground. The saving of time gives an overall fuel savings of approximately 10%, on some applications even greater fuel savings are seen.

The STEINBAUER module's are a Plug'n'Play solution and are designed to be easily installed using original

plug connectors; typically installation can be completed in around 30 minutes.

Designed to withstand even the toughest of conditions

### Do you have what it takes to be a STEINBAUER Dealer?

At STEINBAUER we don't just add new dealers and distributors to our list, first we take the time to learn a little about you and your business. STEINBAUER is a full service company and we pride ourselves on excellence in customer service and we like to ensure that our dealer network is the very best available. We offer full technical training, after sales service and support and world class marketing material and assistance to our dealers. Only an authorized STEINBAUER dealer gets to display this seal of approval. Do you have what it takes to join the STEINBAUER team?

STEINBAUER adheres to the highest European quality standards. Using automotive industry standard gold contacts and sealed connectors this ensures their modules are dust, vibration and moisture resistant.

Committed to the North American market, STEINBAUER has a dedicated office in Charlotte, NC with a small team in place, including their own dedicated sales staff and an ever-growing number of dealers supporting the brand. "With our Charlotte office in place we can better service our customers and dealers. We offer full before and after sales support and are able arrange development and technical support visits from here also." Adds Steinbauer.

So if you are looking to improve the performance of your Ag machine then look no further than STEINBAUER. Call their team today and get some expert advice on what a STEINBAUER can do for you.

**Choose quality. Choose service. Choose STEINBAUER.**

### STEINBAUER - Proven quality costs a little more.

- LARGEST application list on the market
- over 1000 Agricultural applications
- install in under 30 minutes
- no change in Common-Rail pressure
- no ECU flashing - our power module is invisible
- 15 years experience in developing, testing and manufacturing of agricultural machinery products
- tested and sold across the world -operating in all climate conditions
